2021 - 2022
- **Art School of Buda** / Graphic design  
2017 - 2019
- **Nagy Sándor József High School**  
2013 - 2017

## About me

I'm a motivated frontend developer and product designer located in Hungary with passion for design and web development. As a frontend developer, my goal is to achieve a well-structured and readable code, while creating a functional, clear and user-friendly application. I have a great knowledge in UI/UX design and I use it a lot while designing sites before coding them. As a communicative person I like to work in team, and I'm always up for learning new techniques or technologies during my work. I'm an incredibly patient person, which quality I use the most while doing my hobby: it's fishing!

## Work experience

### Junior frontend developer

at GrowingMedia Kft. | 2021 - 2022 | Budapest, Hungary

At GrowingMedia my job was to design websites in Figma, and I was even responsible to develop them using HTML, CSS and Javascript. At the beginning I was studying from bootcamps, but later on I decided to start a school where I could learn professional web development (including NodeJS, React and PHP). I also gained experience in Wordpress thanks to my work.

My very first developed website: [www.nyelvizsga.hu](http://www.nyelvizsga.hu)

### Product designer

at GrowingMedia Kft. | 2019 - 2022 | Budapest, Hungary

My main job at GrowingMedia was to design clear, responsive and user-friendly websites in Figma (doing researches, creating wireframes, then design and prototype these sites). While I was working as a product designer, I also had to develop and maintain these simple websites using HTML and CSS with Javascript.

 [www.linkedin.com/in/tamasszucs-dev](https://www.linkedin.com/in/tamasszucs-dev)

## Programming skillset

- creating responsive websites using semantic HTML structure and proper CSS selectors (with SCSS including variables, mixins and nesting)
- associate knowledge in CSS frameworks like Bootstrap and MUI
- creating 2D and 3D animations with CSS keyframes and Three.js
- working with proper variables while creating functions, using class inheritance and dealing with API & other JSON data in Javascript
- knowledge in ES6+ features and OOP
- handling HTTP requests in NodeJS with Express.js
- knowledge in React (using built-in functions and hooks while creating new ones; component-based architecture; Framer Motion; API fetch with Axios, Redux)
- entry level knowledge in PHP (handling sessions and cookies; working with MySQL database; OOP)
- associate knowledge in UI/UX design

## Work experience

### ▪ Graphic designer

at Alex Fém bútör Kft. | 2018 - 2019 | Zsámbék, Hungary

I spent my entire design internship at Alex Fém bútör where I got my first full-time job as a graphic designer. It was the very first time **I got into website design and development** since one part of my job was to design and code e-mail signatures with HTML and CSS. It was a great time to begin my journey not just in design but also in development, especially when I could take part in the designing and developing of the company's newest website.
